The Great Gatsby is a 1925 novel written by American author F. Scott Fitzgerald that follows a cast of characters living in the fictional town of West Egg on prosperous Long Island in the summer of 1922. The story ____56____ concerns the young and mysterious millionaire Jay Gatsby and his idealistic ____57____ for the beautiful Daisy Buchanan. Considered to be Fitzgerald's masterpiece, *The Great Gatsby* explores ____58____ of decadence (堕落), idealism, resistance to change, social disturbance, and excess, creating a portrait of the Jazz Age or the Roaring Twenties that has been described as an alarming tale regarding the American Dream.

Fitzgerald, ____59____ by the parties he had attended while visiting Long Island's north shore, began planning the novel in 1923 desiring to produce, in his words, "something new—something extraordinary and beautiful and simple and carefully ____60____." Progress was slow with Fitzgerald completing his first draft following a move to the French Riviera in 1924. His editor, Maxwell Perkins, felt the book was too vague and ____61____ the author to revise over the next winter. Fitzgerald was uncertain about the book's title, at various times wishing to re-title the novel *Trimalchio* in West Egg.

First published by Scribner's in April 1925, *The Great Gatsby* received ____62____ reviews and sold poorly; in its first year, the book sold only 20,000 copies. Fitzgerald died in 1940, believing himself to be a failure and his work forgotten. However, the novel ____63____ a revival during World War II, and became a part of American high school curricula and numerous stage and film ____64____ in the following decades. Today, *The Great Gatsby* is widely considered to be a literary classic and a strong competitor for the title "Great American Novel". The book is ____65____ ranked among the greatest works of American literature. In 1998 the Modern Library editorial board voted it the best American novel and the second best novel in the English language.

Ancient Greek philosopher Aristotle viewed laughter as "a bodily exercise precious to health." But __66__ some claims to the contrary, laughing probably has little influence on physical fitness. Laughter does __67__ short-term changes in the function of the heart and its blood vessels, boosting heart rate and oxygen consumption. But because hard laughter is difficult to __68__, a good laugh is unlikely to have __69__ benefits the way, say, walking or jogging does.

__70__, instead of straining muscles to build them, as exercise does, laughter apparently accomplishes the __71__, studies dating back to the 1930's indicate that laughter __72__ muscles.

Such bodily reaction might help moderate the effects of psychological stress. Anyway, the act of laughing probably does produce other types of __73__ feedback that improve an individual's emotional state. __74__ one classical theory of emotion, our feelings are partially rooted in physical reactions. It was argued at the end of the 19th century that humans do not cry because they are sad but they become sad when the tears begin to __75__.

Although sadness also happens before tears, evidence suggests that emotions can flow from muscular responses. In an experiment published in 1988, social psychologist Fritz Strack of the University of Wurzburg in Germany and his colleagues asked volunteers to __76__ a pen either with their teeth --- thereby creating an artificial smile --- or with their lips, which would produce a __77__ expression. Those forced to exercise their smiling muscles __78__ more exuberantly to funny cartoons than did those whose mouths were contracted in a frown, __79__ that expressions may influence emotions rather than just the other way around. __80__, the physical act of laughter could improve mood.

Directions: Read the following passages. Each passage is followed by several questions or unfinished statements. For each of them there are four choices marked A, B, C and D. Choose the one that fits best according to the information given in the passage you have just read.

A

A is for always getting to work on time.

B is for being extremely busy.

C is for the conscientious (勤勤恳恳的) way you do your job.

You may be all these things at the office, and more. But when it comes to getting ahead, experts say, the ABCs of business should include a P, for politics, as in office politics.

Dale Carnegie suggested as much more than 50 years ago: Hard work alone doesn't ensure career advancement. You have to be able to sell yourself and your ideas, both publicly and behind the scenes. Yet, despite the obvious rewards of engaging in office politics—a better job, a raise, praise—many people are still unable—or unwilling—to “play the game.”

“People assume that office politics involves some manipulative (工于心计的) behavior,” says Deborah Comer, an assistant professor of management at Hofstra University. “But politics derives from the word ‘polite’. It can mean lobbying and forming associations. It can mean being kind and helpful, or even trying to please your superior, and then expecting something in return.”

In fact, today, experts define office politics as proper behavior used to pursue one's own self-interest in the workplace. In many cases, this involves some form of socializing within the office environment—not just in large companies, but in small workplaces as well.

“The first thing people are usually judged on is their ability to perform well on a consistent basis,” says Neil P Lewis, a management psychologist. “But if two or three candidates are up for a promotion, each of whom has reasonably similar ability, a manager is going to promote the person he or she likes best. It's simple human nature.”

Yet, psychologists say, many employees and employers have trouble with the concept of politics in the office. Some people, they say, have an idealistic vision of work and what it takes to succeed. Still others associate politics with flattery (奉承), fearful that, if they speak up for themselves, they may appear to be flattering their boss for favors.

Experts suggest altering this negative picture by recognizing the need for some self-promotion.

81. “Office politics” (Line 2, Para. 4) is used in the passage to refer to _____.

- A) the code of behavior for company staff
- B) the political views and beliefs of office workers
- C) the interpersonal relationships within a company
- D) the various qualities required for a successful career

82. To get promoted, one must not only be competent but _____.

- A) give his boss a good impression B) honest and loyal to his company
- C) get along well with his colleagues D) avoid being too outstanding

83. Why are many people unwilling to “play the game” (Line 4, Para. 5)?

- A) They believe that doing so is impractical.
- B) They feel that such behavior is unprincipled.
- C) They are not good at manipulating colleagues.
- D) They think the effort will get them nowhere.

84. The author considers office politics to be _____.

- A) unwelcome at the workplace
- B) bad for interpersonal relationships
- C) indispensable to the development of company culture
- D) an important factor for personal advancement

85. It is the author's view that _____.

- A) speaking up for oneself is part of human nature
- B) self-promotion does not necessarily mean flattery
- C) hard work contributes very little to one's promotion
- D) many employees fail to recognize the need of flattery

As Artificial Intelligence(AI) becomes increasingly sophisticated, there are growing concerns that robots could become a threat. This danger can be avoided, according to computer science professor Stuart Russell, if we figure out how to turn human values into a programmable code.

Russell argues that as robots take on more complicated tasks, it's necessary to translate our morals into AI language.

For example, if a robot does chores around the house, you wouldn't want it to put the pet cat in the oven to make dinner for the hungry children. "You would want that robot preloaded with a good set of values," said Russell.

Some robots are already programmed with basic human values. For example, mobile robots have been programmed to keep a comfortable distance from humans. Obviously there are cultural differences, but if you were talking to another person and they came up close in your personal space, you wouldn't think that's the kind of thing a properly brought-up person would do.

It will be possible to create more sophisticated moral machines, if only we can find a way to set out human values as clear rules.

Robots could also learn values from drawing patterns from large sets of data on human behavior. They are dangerous only if programmers are careless.

The biggest concern with robots going against human values is that human beings fail to do sufficient testing and they've produced a system that will break some kind of taboo (禁忌).

One simple check would be to program a robot to check the correct course of action with a human when presented with an unusual situation.

If the robot is unsure whether an animal is suitable for the microwave, it has the opportunity to stop, send out beeps, and ask for directions from a human. If we humans aren't quite sure about a decision, we go and ask somebody else.

The most difficult step in programming values will be deciding exactly what we believe in moral, and how to create a set of ethical rules. But if we come up with an answer, robots could be good for humanity.

86. What does the author say about the threat of robots?

- A)It may constitute a challenge to computer programmers.
- B)It accompanies all machinery involving high technology.
- C)It can be avoided if human values are translated into their language.
- D)It has become an inevitable peril as technology gets more sophisticated.

87. What would we think of a person who invades our personal space according to the author?

- A)They are aggressive.

B)They are outgoing.

C)They are ignorant.

D)They are ill-bred.

88. How do robots learn human values?

A)By interacting with humans in everyday life situations.

B)By following the daily routines of civilized human beings.

C)By picking up patterns from massive data on human behavior.

D)By imitating the behavior of property brought-up human beings.

89. What will a well-programmed robot do when facing an unusual situation?

A)keep a distance from possible dangers.

B)Stop to seek advice from a human being.

C)Trigger its built-in alarm system at once.

D)Do sufficient testing before taking action.

90. What is most difficult to do when we turn human values into a programmable code?

A)Determine what is moral and ethical.

B)Design some large-scale experiments.

C)Set rules for man-machine interaction.

D)Develop a more sophisticated program.
