第 I 卷

I. Listening comprehension(25')

略

II. Grammar and Vocabulary(31'+20')

Section A

Directions: Beneath each of the following sentences there are four choice marked A, B, C and D. Choose the one answer that best completes the sentence.

1. With the newly bought knife, even the frozen meat _____. You will get what you pay for.
A. is easily cut B. is easy to be cut C. cuts easy D. cuts easily
2. Here is my note book! I _____ anxious till now and _____ for it a whole day yesterday.
A. am; have been looking B. have been; was looking
C. am; had looked D. have been; had been looking
3. I didn't answer his phone call because I had put my mobile phone to mute. When I _____ his call, he just called in again.
A. returned B. was to return C. was returning D. would return
4. —Why? Tony, you are wearing slippers to school today!
—Oops! Sorry, but I _____ that because I _____ about things.
A. don't notice; am thinking B. didn't notice; was thinking
C. haven't noticed; have been thinking D. wasn't noticing; have been thinking
5. We were very interested in the topic our teacher assigned us today. _____ even when the bell rang.
A. There were some problems remained to be discussed
B. Some problems were remained to discuss
C. There remained some problems to be discussed
D. Some problems remained to discuss
6. —Is Sarah still writing her thesis?
—Yes. By the end of the week, she _____ on it for three whole months.
A. will work B. will have worked C. has been working D. will have been working
7. —_____ you _____ in your homework in the morning?
—Yes, I _____ it in before the teacher came.
A. Have... Handed; handed B. Did.... hand; have handed
C. Have... handed; had handed D. Did ... hand; had handed
8. The well-designed gallery houses 2000 works of modern art and is _____.
A. well worth a visit B. really worth of visiting
C. worth your while to be visited D. very worthy to visit
9. How come it _____ when I have just washed my car!
A. always rains B. is always raining C. will always rain D. is always to rain
10. What _____ that caused the plane crash?
A. you think was it B. do you think was it C. you think it was D. do you think it was
11. Whenever I felt frustrated in my life, Julin would try to cheer me up and wanted me to bear in mind that every cloud _____ a silver lining.
A. had B. would have C. will have D. has

12. Angela was weeping in the corner of the room. Ruby _____ something to comfort her when Mia patted Ruby on the shoulder and told her to leave Angela alone.
A. was about to say B. was going to say C. was to say D. would say
13. Shawn generally does well in his English dictation, but every now and then he _____.
A. has failed B. is failing C. will fail D. does fail
14. Congratulations on your winning the championship in the sports meeting! It _____ of great use in such training.
A. has been proved B. is proved C. has proved D. proven
15. The result of the maths exam has come out. This is the first time that I _____ relieved in senior high school and I think it is high time that I _____ to work hard on English.
A. felt; should start B. have felt; started C. feels; will start D. have felt; start
16. Steven trains hard. He is often seen _____ heavily before his teammates start.
A. to sweat B. to be sweated C. sweating D. being sweated
17. There is much evidence that _____ is aggression a male-only character.
A. by no means B. all at once C. no doubt D. in any event
18. _____ the difficult circumstances, you have done very well.
A. Giving B. Assuming C. Considering D. Establishing
19. You can only gain _____ to this high-end housing estate through a millionaire friend. Which of the following words can NOT complete the sentence?
A. enhance B. access C. entry D. admission
20. Aileen thinks she is a member of our strong nation and should strive for the _____ of the Great Rejuvenation of the Chinese Nation.
A. labor B. origin C. benefit D. cause
21. More _____ farmers have been able to provide cheaper food.
A. effective B. productive C. defensive D. constructive
22. If his criticism was not directed at me, what did he mean _____ that remark?
A. with B. in C. of D. by
23. They gave me some help in the beginning, but it didn't _____ to much.
A. add B. amount C. equal D. refer
24. The high cost is a major _____ of the new heating system.
A. setback B. drawback C. feedback D. flashback
25. Seeing her idol appear on the stage, Dorothy was unable to _____ her excitement.
A. contain B. refrigerate C. envelop D. close
26. Don't open the window! It's _____ cold outside.
A. freeze B. freezing C. froze D. frozen
27. For the purpose of mutual advancement, they _____ their differences.
A. set aside B. put aside C. turned aside D. pushed aside
28. Max stared at his own _____ reflected in the watch of the Green lake, lost in thought.
A. imagination B. image C. implication D. implement
29. This spring she thought of building a go-kart to _____ the Go Go Race.
A. sign for B. long for C. finance for D. enter for
30. This large woodland is _____ to many birds and other wildlife.
A. local B. home C. native D. belonged
31. _____ to deliver the urgent dispatch to the officer _____.
A. Every means were tried; immediately B. Every means was tried; instantly
C. All means were tried; currently D. All means was tried; temporarily

Directions: Complete the following passages by using the words in the box. Each word can only be used once. Note that there is one word more than you need.

A. virtually B. swiftly C. avoiding D. appeal E. feasible F. imposed G. reducing
H. released I. limited J. fuel K. authority

It sounds like a science-fiction nightmare. But “killer robots” have the likes of British scientist Stephen Hawking and Apple co-founder Steve Wozniak warning the machines could ____32____ ethnic cleansings (种族清洗) and an arms race.

Autonomous weapons, which use artificial intelligence to select targets without human intervention have been described as “the third revolution in warfare, after gunpowder and nuclear arms,” about 1,000 tech scientists wrote in an open letter on July 28, 2015.

Unlike drones, which require a human hand in their action, this kind of robot would have some autonomous decision-making abilities and the capacity to act on its own ____33____.

“The key question for humanity today is whether to start a global AI (artificial intelligence) arms race or to prevent it from starting,” they wrote. “If any major military power pushes ahead with AI weapon development, a global arms race is ____34____ inevitable,” said the letter ____35____ at the opening of the 2015 International Joint conference on Artificial intelligence in Buenos Aires.

The idea of an automated killing machine, made famous by Arnold Schwarzenegger’s Terminator, is moving ____36____ from science fiction to reality, according to the scientists. “The organization of such systems is — practically if not legally — ____37____ within years, not decades,” the letter said.

The development of such weapons, while potentially ____38____ the extent of battlefield injuries, might also lower the necessity for going to battle, noted the scientists.

The scientists painted a terrible scenario in which autonomous weapons fall into the hands of terrorists, dictators or war lords hoping to carry out ethnic cleansings.

The group concluded with a(n) ____39____ for a “ban on offensive autonomous weapons beyond meaningful human control.”

In a 2014 BBC interview, Hawking said the development of full artificial intelligence could spell the end of the human race. “It would take off on its own, and re-design itself at an ever increasing rate. Humans, who are ____40____ by slow biological evolution, couldn’t compete, and would be replaced,” he said.

Authorities are gradually waking up to the risk of robot wars. Last May, the US government ____41____ a 10-year human control requirement on automated weapons. For the first time, the United Nations brought governments together to begin talks on so-called fatal autonomous weapons systems that can select targets and carry out attacks without direct human intervention.

(B)

Directions: Complete the following passages by using the words in the box. Each word can only be used once. Note that there is one word more than you need.

A. suffering B. intensive C. demanding D. adopting E. inactive F. adapting G. available
H. guarantee I. distinctive J. discouraging K. distinct

Health and diet

In recent years, many Asian countries have noticed a worrying new problem: obesity, which is also very serious in China. More than a third of Chinese adults are overweight. Even more worrying is the level of obesity among Chinese children. It is estimated that the number of children in China ____42____ from obesity is increasing by 10 % every year.

There are many reasons for this situation. The simplest explanation is that food is now ____43____ in greater quantities than ever before. Also, Chinese society is changing

and people are ____44____ new kinds of lifestyle. There has been an influx of Western style fast food like hamburgers and fried chicken. These foods contain a lot of calorie and are a major cause of obesity. In addition, many children in China spend too much time in front of TVs or computers. To make things worse, millions of families drive around instead of cycling or walking. This ____45____ lifestyle is another reason for heavier people.

Increasing obesity is worrying for many reasons. The condition can lead to serious health problems, including increased risk of heart disease and even diabetes. Dealing with their health problems seems really costly and ____46____, thus affecting people's life negatively.

The government in China is taking action to deal with obesity, however. In many primary and middle schools, young students are receiving low calorie lunches with more vegetables and less meat and fat. Also, parents are ____47____ children from watching TV and playing computer games. In some big cities, there are also "fat camps" where seriously obese children receive ____48____ training, aiming at losing extra fat.

It is not ____49____ if these measures will be enough to slow down or stop the obesity trend in China. It is clear, though, what we are doing now is to guide people in ____50____ to healthier and more active lifestyle. It is the ____51____ of the rise in the index of people's happiness.

III. Reading Comprehension(15' +22'+8')

Section A

Directions: For each blank in the following passage there are four words or phrases marked A, B, C and D. Fill in each blank with the word or phrase that best fits the context.

Female penguins get stranded

Every year, thousands of Magellanic penguins (麦哲伦企鹅) get stranded along the coast of South America, but, ____52____ about 75% of those that get stuck are female. Now scientists say they have worked out what is behind the gender ____53____: the females migrate further north than males. Magellanic penguins finish breeding in Patagonia in February, and, during the ____54____ winter months, head north, reaching as far as Brazil, in search of anchovies (凤尾鱼). But every year thousands become stranded, with many ____55____ to safety on board military aircraft by human. Writing in the journal *Current Biology*, researchers in Japan and Argentina report how they ____56____ tracking device to eight male and six female penguins in 2017 and tracked where the birds went after they left the breeding grounds of Cabo dos Bahfa in Argentina and began the migration north in April. Previously it was unknown whether male and female's took different paths or not. "Although some ____57____ are made, the exact reason for the ____58____ stranding has been unknown due to the lack of information on their behavior outside the breeding season." said Takashi Yamamoto, a co-author of the report from the Institute of Statistical Mathematics in Japan.

The results from the study offer a clearer picture. ____59____ the authors note that only a small number of penguins were tracked, all the female's generally traveled further north. The male, meanwhile, predominantly stuck to waters of the Argentinian coast. The study also found male ____60____ dived deeper than female's: about 59 metres compared with about 35 metres.

The authors offer a number of reasons why males and females may head to different areas— including to avoid ____61____ for food—and why they dive to different ____62____ —the females' smaller bodies may restrict the depths they can reach. They also suggest the different sexes may seek waters of different temperatures, with the ____63____ females preferring warmer, shallower surroundings.

While researchers are still trying to understand why penguins end up stranded, Yamamoto and colleague's suggest those that end up further north may have used more energy swimming or catching ____64____ prey, leaving them exhausted. Climate change, pollution in the area or injury from fishing equipment could also play a role. Reports of

standings have noted that many penguins are unwell or exhausted, with some even washing up dead. “____65____, plastic remains have been reported in the stomach of beach-washed Magellanic penguins,” said Yamamoto, adding that a skewed sex ratio could potentially lead to a population decline. While the findings may not help prevent strandings, Yamamoto said it could help with ____66____ of the species. “If we do not consider any action, such as marine zoning, I expect that the number of stranding individuals will increase.”

Section B

Directions: Read the following three passages. Each passage is followed by several questions or unfinished statements. For each of them there are four choices marked A, B, C and D. Choose the one that fits best according to the information given in the passage you have just read.

(A)

Tiny trash factories

Not all waste has to go to waste. Most of the world’s 2.22 billion tons of annual trash ends up in landfills or open dump. Veena Sahajwalla, a materials scientist and engineer at the University of New South Wales, has created a solution to our massive trash problem: waste microfactories. These little trash processors house a series of machines that recycle waste and transform it into new materials with thermal technology. The new all-in-one approach could leave our current recycling processes in the dust.

Sahajwalla launched the world’s first waste microfactory targeting electronic waste in 2018. A second one began recycling plastics in 2019. Now, her lab group is working with university and industry partners to commercialize their patented Microfactoric technology. She says the small scale of the machines will make it easier for them to one day operate on renewable energy, unlike most large manufacturing plants. The approach will also allow cities to recycle waste into new products on location. With a microfactory, gone are the days of needing separate facilities to collect and store materials, extract elements and produce new products.

Traditionally, recycling plants break down materials for re use in similar products. It is like melting down plastic to make more plastic things. Her invention evolved this idea by taking materials from an old product and creating something different. “The kids don’t look like the parents,” she says.

For example, the microfactories can break down old smart phones and computer monitors and extract silica and carbon, and then combine them into silicon carbide nanowires. This generates a common ceramic material with many industrial uses. Sahajwalla refers to this process as “the fourth R,” adding “____67____” to the common

phrase “reduce, reuse, recycle.”

In 2019, just 17.4 percent of e-waste was recycled, so the new ability offers a crucial new development in the challenge recycling complex electronic devices. “We can do so much more with materials,” says Sahajwala.” Traditional recycling has not worked for every recycling challenge.” She and her team are already working to install the next waste microfactory in the Australian town of Cootamundra by early 2021, with the goal of expanding around the country over the next few years.

67. Which of the following is the feature of the waste microfactory?

- A. It can restore the waste to their original forms.
- B. It is cleaner than the traditional recycling plant.
- C. Waste can be recycled where they are dump at.
- D. There is only one machine in the waste microfactory.

68. According to the passage, what are the scientists working on presently?

- A. Establishing the first waste microfactory.
- B. Expanding the variety of waste it can recycle.
- C. Trying to make a profit from microfactory technology.
- D. Developing renewable energy to operate microfactories.

69. Which of the following words is most suitable to fill in the blank in paragraph 4?

- A. recall B. reform C. release D. reverse

70. Which of the following statement is true, according to the message?

- A. Traditional recycling is actually useful for only a small part of waste recycling.
- B. Microfactories make it possible for scientists to create various things with wastes,
- C. Microfactories can directly make waste electronic device into household utensils.
- D. By now, Australia is the first country in the world that has realized the popularization of waste microfactories.

(B)

Shipping containers are gaining popularity as an alternative to traditional houses. These 20-or 40-foot containers can be obtained for a little as several hundred US dollars apiece, and it's not surprising that some industry professionals and even city planners consider them the future of home building. Below are details of some amazing homes made out of shipping containers.

London Container City(I and II)

London's Container City first sprang up in the heart of the docklands in 2001. It took just five months to complete the original 12 work studios. Shortly after that, a fourth floor of studios and living apartments was built on top of these. The first container city was so successful that another — Container City II — was added to it.

Los Angeles Redondo Beach house

With its modern lines and appealing spaces, the award-winning Redondo Beach House is a luxury beachside showpiece built from eight recycled steel shipping containers, along with some traditional building materials. According to the architects, the modified containers are “nearly indestructible”.

Amsterdam Keetwonen

Amsterdam's massive Keetwonen complex houses 1,000 students and it is the largest container city in the world. The housing project is a roaring success and features units that are quiet and comfortable. Each resident enjoys a bathroom, kitchen and separate sleeping and studying quarters. The complex even has central heating and high-speed internet as

well as areas for parking bikes.

Mexico M2ATK Container House

M2ATK designed this unique container house for an artist. It's fully equipped with heating and cooling, a kitchen and bathroom. On the bottom floor of the house are "public spaces" such as the kitchen and living room. The second floor is the bedroom, and the top floor is a studio space in which to work, read and "let fly the imagination".

71. Compared to traditional houses container houses are ____.

- A. easier to maintain
- B. less expensive to build
- C. more comfortable to live in
- D. more fashionable in style

72. What can be learned about Amsterdam's Keetwonen complex?

- A. It is the first container city in the world.
- B. It's equipped with modern facilities.
- C. It features a luxury and unique style.
- D. It includes living space and car parks.

73. Which of the following is the best title for the poster?

- A. Recycled material for Ideal Home
- B. Shipping Container Home Challenges
- C. Home in a Steel Box
- D. Housing Options and Solutions

(C)

Why can't we stop longing for the good old days

People in many countries are longing for the good old days. But when exactly were the good old days? Podcaster Jason Feifer devoted an episode of his program to this question. The most popular answer seemed to be the 1950s, so Mr. Feifer asked historians whether Americans in that decade thought it was particularly pleasant. Definitely not. In the 1950s, American sociologists worried that rampant individualism was tearing the family apart. There were serious racial and class tensions, and everyone lived under the nuclear threat.

In fact, many in the 1950s thought that the good old days were to be found a generation earlier, in the 1920s. But in the 1920s, child psychologist John Watson warned that because of increasing divorce rates, the American family would soon cease to exist. Many people at the time idealized the Victorian era, when families are strong and children respected their elders.

Why are human beings always so nostalgic for past eras that seemed difficult and dangerous to those who lived through them? One possibility is that we know we survived past dangers, so they seem smaller now. But we can never be certain we will solve the problems we are facing today. Radio didn't ruin the younger generation, but maybe the smart phone will.

Another reason is that historical nostalgia is often colored by personal nostalgia. When were the good old days? Was it, by chance, the incredibly short period when you happened to be young? A U.S. Poll found that people born in the 1930s and 1940s thought the 1950s was America's best decade, while those born in the 1960s and 1970s preferred the 1980s.

This kind of nostalgia has neurological roots. Researchers have found that we encode more memories during adolescence and early adulthood than any other period of our lives, and when we think about the past, this is the period we most often return to. Moreover, as we grow more distant from past events, we tend to remember them more positively.

Obviously, some things really were better in the past. But our instinctive nostalgia for the good old days can easily deceive us, with dangerous consequences. Longing for the past and fear of the future inhibit the experiments and innovations that drive progress.

Vaccination, steam engines, railroads and electricity all met with strong resistance when they were first introduced. The point isn't to show how silly previous generations were. The same kinds of anxieties have been expressed in our own time about innovations like

the internet, video games and stem-cell research.

And not all fears about the future are unbounded. New technologies do result in accidents, they disturb traditional cultures and habits, and they destroy old jobs while creating new ones. But the only way to learn how to make the best use of new technologies and reduce risks is by trial and error. The future won't be perfect, but neither were the good old days.

74. The word "rampant" in paragraph 1 is closest in meaning to _____

- A. limited B. reasonable C. uncontrolled D. traditional

75. According to the passage, the 1950s was a period of time _____.

- A. when American families still remained strong and children respected their elders
B. that was believed by Americans born in the 1930s and the 1940s to be the best decade
C. that saw a sharp increase in individualism and divorce rate in American society
D. when radical and class tensions became more serious but people no longer lived under the nuclear threat

76. The good old days were usually the time when people were young because _____

- ① people have a better memory of adolescence and early adulthood.
② More dangerous things happen during their youth and they learned how to survive them.
③ The dangers in youth were smaller and easier for people to deal with.
④ people remember events in their youth more positively as time goes by.

- A. ①② B. ①③ C. ①④ D. ②④

77. What can be inferred from the last three paragraphs?

- A. The current generation is not as silly as the previous generations.
B. It is unwise to be simply opposed to any new inventions and technologies.
C. People are constantly deceived by their instinctive nostalgia for the good old days.
D. The internet, video games and stem-cell research pose great threats to humanity.

Section C

Directions: Read the following passage. Fill in each blank with a proper sentence given in the box. Each sentence can be used only once. Note that there are two more sentences than you need.

How to save planet earth

Have you ever held a product in your hands and considered the existential weight of your purchase? Beyond each price tag hides a ripple effect. It expands from soil to water ways, grocery aisle to kitchen plates, factories to fulfillment centers and mail slots to landfills. This global impact has become less hidden in the past decade, and ignoring the people downstream from us has grown increasingly difficult. We're more aware than ever of the mark our consumption leaves on planet Earth, which now sustains nearly 8 billion people. Somehow, humans are still pumping more than 30 gig a tons of carbon dioxide(CO₂)per year into the atmosphere, despite the mountain of evidence that CO₂ is the top contributor to greenhouse gases causing global warming. ____78____ We know we need to do better, but we feel helpless and overwhelmed. Let's call this the eco-essential crisis; it applies on a deeply personal level for most environmentally aware humans, and on a global scale.

Climate journalist and author Tatiana Schlossberg says even a simple trip to the supermarket can feel paralyzing in 2021. "I want to buy the local thing, but it's not organic. Or, maybe it's in a plastic box," she says. In her 2019 book *Inconspicuous Consumption*, she ventures way beyond the store aisle and into the web of less apparent ways that humans are damaging Earth. For example, your internet use is tied to extensive carbon emissions and energy consumption. ____79____ The world is more complicated than that.

In fact, being a good citizen on planet Earth with climate concerns, you've likely asked or agonized over this question: What should I do? ____80____ So, we took this question to

新东方 老师好!

five people who have immersed their careers, research and writing in the realities of climate science. One of their most consistent insights may surprise you: Consumer responsibility misses the mark. "One of the major failings of the environmental movement is having everyone focus on these small things that everyone can do," says Ayana Elizabeth Johnson-a marine biologist and co-host of the podcast How to Save a Planet. ____81____ There are just more meaningful and long-lasting ways to expend your energy in the climate fight. Most of them involve organization and collective action. "Individuals join together to collectively have far more power changing the system than they can as individuals," says Anthony Leiserowitz, director of the Yale Program on Climate Change Communication.

- A. That doesn't mean it's none of your business.
- B. these experts propose other key steps that every human can take toward a better future.
- C. Similar challenge apply to use of plastics and consumption of meat and other goods.
- D. Part of the challenge with the environmental movement is the astonishing list of things we need to change.
- E. The solution to this problem, however, is not for you to stop using the internet, according to Schlossberg.
- F. It's easy to get lost in the storm of supposed answers around social media, the latest data sets and "ego-friendly" marketing campaigns.

第II卷

IV. Blank Filling(8 ')

82. My new bedroom_____(measure)15ft by 12ft, which is big enough for me. (所给词的适当形式填空)

83. Each card _____(label) with the file name that shows the text of the log itself. (所给词的适当形式填空)

84. He _____(mean) to help me move into a new dorm but he fell ill and didn't come. (所给词的适当形式填空)

85. A 2016 documentary which_____(feature) the Forbidden City's cultural relics and their restorers urged lots of college students to apply to work as volunteers there. (所给词的适当形式填空)

86. When Tom entered the room, he found some students were looking at him and smiling weirdly. He was sure that he _____(laugh at). (所给词的适当形式填空)

87. The year 2020 _____(see) remarkable changes in Shanghai's landscape. (所给词的适当形式填空)

88. He will have learned English for eight years by the time he _____ (graduate) from the university next year. (所给词的适当形式填空)

89. The foreigners will arrive on Monday. During the week that _____(follow) they will visit the Bund, the Yu Garden and etc. (所给词的适当形式填空)

V. Translation:

Section A(6')

Directions: Translate the following phrase in the brackets into English.

90. Not only _____ (这些应用不仅节省时间), they also provide us with many choices of restaurants.

(根据汉语提示完成句子)

91. In Xi'an where history comes alive, you can visit _____ (像兵马俑这样的一些历史名胜). (根据

汉语提示完成句子)

92. Despite _____ (食品外卖服务有缺点), people use it on a regular basis and cannot live without

it. (根据汉语提示完成句子)

93. It is said that during the process of application, many applicants _____ (因为各种原因被淘汰了).

(根据汉语提示完成句子)

94. Before camping, the coaches may take away all the light starters _____ (为了确保 没人玩火).

(根据汉语提示完成句子)

95. The company, which occupies several floors in this office building, is considering _____ (安装节

能灯泡). (根据汉语提示完成句子)

Section B(+3'+4 '+5'=15')

Directions: Translate the following sentence into English, using the words given in the brackets.

96. 应该采取严格的措施限制在便利店使用塑料袋。(measure) (汉译英)

97. 去年双 11, 我刚决定买我选中的商品, 它瞬间就卖光了。(No sooner) (汉译英)

98. 为了减少碳足迹, 政府号召市民在将垃圾扔进垃圾场之前先进行分类。(appeal) (汉译英)

99. 最重要的是你应该为人类的文明和全球的发展做出贡献, 无论你有什么国籍。(matter) (汉译英)
